

# SINGLE-USE OR REUSABLE SYRINGES

*We offer medical grade thermoplastic solutions and technical support for critical medical applications to help combat the COVID-19 crisis.*

## How can we help you?

RTP Company has developed medical grade compounds for components of single-use or reusable syringes, including:

- Syringe Plunger Tips - thermoplastic elastomers that are ISO 10993 tested
- Plungers - lubricous wear and friction resistant compounds that eliminate “stiction”
- Syringe barrels - functional additives for laser marking
- Specimen caps - pre-color compounds for differentiation

In addition, RTP Company can help you select a material that can meet your sterilization requirements.

## The Right Compounds for Your Needs

Depending on your application requirements, RTP Company can provide the thermoplastic compound

that fits your needs. Our portfolio includes thermoplastic elastomers for flexibility and durability; wear and friction resistant compounds for smooth operation of moving parts; laser-markable compounds specifically formulated for durable marking processes; and pre-colored compounds to help differentiate syringe and accessory types

## Material Solutions: Yesterday, Today, and Tomorrow

We have always been committed to providing material solutions to solve even the most challenging application requirements. During these unprecedented and uncertain times, we are partnering with you to fight the COVID-19 battle with materials that provide solutions today... and beyond.
